OVERVIEW

Thank you for purchasing WPDollar, the best Wordpress plugin for Amazon Ads.

WPDollar is the easy way to display Amazon text ads with customizable style, ad banners and add Amazon product reviews. Just add your amazon affiliate account details, select your categories and save the campaign.

It really is that simple to use.

WPDollar gives you a very easy interface to display targeted and customizable text ads that can be made to look like adsense ads or a part of the content. With style customization, targeted keywords, different categories for different campaigns and various size and display option, WPDollar is perfect to display highly converting Amazon ads on your wordpress blog.

Fill your blog with targeted Amazon product review posts and create a mini-Amazon store of your blog with scheduled posts timing, number of posts to make, keywords and more. You can manage you campaigns for different categories separately.

Also, add all sorts of banners or opt-in/social-buttons etc. on each of your post differentiated by categories.

Use your imagination and creativity to create stunning and profitable niche blogs using WPDollar.

I hope you enjoy the product.

Regards

Abhi & Martin

INSTALLATION

Minimum Server Requirements:

WPDollar requires the following minimum web-server software requirements to function properly. You will need to make sure that your web-server or web-hosting supports all of them:

- a. PHP 5.0 or Higher
- b. cURL
- c. Latest version of MySQL

Wordpress versions supported:

WPDollar is designed to be compatible with Wordpress 3.0.1 and higher. WPDollar is not backward compatible with any version of Wordpress lower than 3.0.1.

Please contact support if you have a crucial requirement for backward compatibility.

Unzipping WPDollar

Once you have downloaded WPDollar after purchasing it, you will need to use software such as WinZip or WinRar to extract the contents of the file named WPDollar.zip to your hard drive.

There is one single folder named "WPDollar" in the WPDollar.zip file.

This folder will need to be uploaded to public_html/wp-content/plugins or domain_name/wp-content/plugins folder of your wordpress blog installation.

Make sure that you do not change the name of the folder or any other content without prior knowledge of its functioning. Your installation might not work properly otherwise.

Uploading WPDollar to your blog

Once you unzip the files of WPDollar.zip, you will need to upload the content to the above mentioned directory in your web-server or web-hosting server. The location where you need to upload the directory is "wp-content/plugins" directory on your wordpress blog installation.

If you are using a web-hosting service such as HostGator or GoDaddy or any other cPanel web-host, you will need to following their cPanel file manager instructions for uploading files to the server.

You can also use an FTP client such as FileZilla to upload the files to your server.

If you are not sure about upload the content, please contact WPDollar support or your web-hosting technical support for assistance.

Wordpress Auto-Install

You can skip the unzipping and uploading step and directly upload and install the WPDollar plugin directly from your wp-admin panel.

Login to www.YOURBLOG.com/wp-admin using your credentials and click on:

Plugins>Add New>Upload

then click on browse and select WPDollar.zip file and click select. Once done, click on “upload file” button.

This will upload and install the WPDollar plugin to your blog automatically.

GETTING STARTED

Activating WPDollar

Once you have uploaded the WPDollar folder to your wp-content/plugins directory on your webserver or upload it using the "Add New" function under WP-Admin>Plugins, you will need to activate it in order to use it.

To Activate WPDollar plugin, login to your Wordpress blogs admin panel using <http://www.yourblogurl.com/wp-admin> (remember to change www.yourblogurl.com with your blogs web address or URL) and click on Plugins Tab:

Look for WPDollar plugin in the Inactive plugins section and click activate.

WPDollar – Wordpress Plugin For Amazon | User Manual

Once WPDollar has activated successfully, your screen would look something like this:

Once this is done, you should see a new WPDollar menu panel on the bottom-left much like this:

You are now ready to configure WPDollar as per your requirements.

General Settings:

The General settings tab contains 5 quick setting options.

- a. **Amazon Affiliate ID:** This is your Amazon Affiliate username which you can get one by registering at: <https://affiliate-program.amazon.com/>
- b. **Amazon API Key:** This is your Amazon WebServices API Key which you can get by logging in using your Amazon Affiliate credentials at: <http://aws-portal.amazon.com/gp/aws/developer/account/index.html> and then clicking on "Security Credentials" under Account menu. Scroll down a little and you should see your API key under "Access Key ID".
- c. **Amazon Secret Key:** This is your Amazon WebServices Secret Key which you can get the same way finding your Amazon API Key. Just click on "Show" under "Secret Access Key".
- d. **Amazon Description Length:** The description length is the number of words the plugin will fetch while creating an Amazon product review post.
- e. **Amazon Website:** This is where you can select the targeted Amazon International website to promote.

The screenshot shows the 'General' settings panel for the WPDollar plugin. It features five configuration options on an orange background:

- Amazon Affiliate ID:** A text input field with a help icon (?) to its right.
- Amazon API Key:** A text input field with a help icon (?) and a link labeled 'here' to its right.
- Amazon Secret Key:** A text input field with a help icon (?) and a link labeled 'here' to its right.
- Amazon Description Length:** A dropdown menu currently set to '250 Characters' with a help icon (?) to its right.
- Amazon Website:** A dropdown menu currently set to 'Amazon.com' with a help icon (?) to its right.

A 'Save Option' button is located at the bottom center of the settings panel.

SEO:

The SEO settings tab has been completely minimized and simplified for your convenience. The WPDollar handles pretty much all the SEO automatically. This tab contains 2 options.

- a. **Add keywords to images 'alt':** It is recommended to check this box. When an Amazon Product Review post is created, an image is automatically added to the post and keywords are added to the 'alt' tag of the images in the HTML of the post.

- b. **Affiliate Link Cloaking:** This is another simple checkbox option. Once checked, it will cloak all your Amazon outgoing affiliate links in your WordPress blog.

Ad Unit:

The Ad Unit settings are to style your text ad box. Using these 10 simple setting options to choose from borders to color for your ad box. Please refer to the tutorial video on "Ad Unit" for more details.

Ad Unit

Product Images:	Show product images	?
Prices:	Show all prices	?
Clicked Link to Open in:	Same window	?
Border:	Show border	?
Background Color	FFFFFFF	?
Normal Text Color	000000	?
Link Text Color	000000	?
Price Text Color	000000	?
Ad Border Color	CCCCCC	?
Amazon Logo Color	3366FF	?

Save Option

Text Ad Campaign:

This is the settings page where you can create a Text Ad Campaign for your blog. This will help you configure the ad box size, the name, supporting keywords, Ad location and targeted categories for your text ad campaign. Please refer to the tutorial video on "Text Ad Campaign" for more details.

Text Ad Campaign

Campaign Name: ?

Text Ad Box Size: 300x250 ?

Keywords: ?

Ad Location: Above content Below content ?

Category Targeting: ?

Activate: ?

Post Campaign:

This is the settings page where you can create a Amazon Product Review Post Campaign for your blog. This will help you configure the amazon department, the name, the supporting keywords, targeted categories, post frequency, number of post for this campaign and content spinning option for your campaign. Please refer to the "Amazon product Review Post Campaign" for more details.

Post Campaign

Name Your Campaign:	<input type="text"/>	?
Amazon Department:	All <input type="button" value="v"/>	?
Keyword:	<input type="text"/>	?
Category:	Uncategorized <input type="button" value="v"/>	?
Post Every:	<input type="text"/> >Minutes <input type="button" value="v"/>	?

Content Spinning:	<input type="checkbox"/>	?
Publish First Post Immediately:	<input type="checkbox"/>	?

Add Banner:

This is the settings page where you can create a Banner campaign for your blog. This will help you configure the name, banner code, position, targeted categories and alignment of the banner for this campaign. Keep in mind that you can display not only banners but your optin forms, other adverts or use any HTML/JS/PHP code in the "Banner Code" field. Please refer to the "Add Banner" tutorial video for more details.

The screenshot shows the 'Add Banner' settings page with the following fields and options:

- Banner Name:** A text input field with a help icon.
- Banner Code:** A large text area for entering HTML/JS/PHP code, with a help icon.
- Banner Position:** Two radio buttons: Above content and Below content, with a help icon.
- Banner Targeting:** A dropdown menu currently showing 'Uncategorized', with a help icon.
- Alignment:** A dropdown menu currently showing 'Left', with a help icon.
- Activate:** A checkbox with a help icon.
- Create Banner:** A button at the bottom of the form.

View Created Campaigns:

This is your desk panel where you can view all the text ads, amazon product review posts and banner ad campaigns, all at one place. You can edit and/or delete these campaigns whenever you want using the "View Create Campaigns" tab. Please refer to the tutorial video on "Managing Created Campaigns" for more details.

WEBHOSTING

WPDollar has been tested on several Webhosting providers, including [HostGator](#) and GoDaddy. We personally recommend [HostGator](#) over any other webhost for their awesome support, services and cheapest pricing for quality. The WPDollar was built and test on [HostGator](#) platform so you can be confident that it will work perfectly on [HostGator](#).

You can also try NameCheap.com and HostMonster.com as an alternate.

SUPPORT

The WPDollar support is available 24X7 through the WPDollar-Customers Support desk. You will need to sign up there and can create your support threads for assistance.

Upon purchasing WPDollar, you will be mailed with your product copy and instructions on how to access the member's area along with the support desk, so make sure you keep the mail in a safe and accessible folder in your mailbox.

All support inquiries must be made through the support desk ONLY. We might not be able to reply to all your emails quickly.
